EDUTECH

Online education is a form of education where students use their home computers through the internet. For many nontraditional students, among them all those who want to continue working full time or raising families, online graduations and courses have become popular in the past decade.

Our site EDUTECH contains the following functionalities.

1 Only Limited Trusted Educators Post various important Topics on our site.

2 Follow tags and find similar topics.

3 Ask your queries on a particular topic.

4 Share an informative topic with others via mail.

5 See what are the trending topics on site.

Django- Creating a Project

EDUCATOR-Kritikabhatore

Create a Project
Now that we have installed Django, let's start using it. In Django, every web app you want to create is called a project; and a project is a sum of applications. An application is a set of code files relying on the MVT pattern. As example let's say we want to build a website, the website is our project and, the forum, news, contact engine are applications. This structure makes it easier to move an application between projects since every application is independent.
Whether you are on Windows or Linux, just get a terminal or a cmd prompt and navigate to the place you want your project to be created, then use this code:
django-admin startproject myproject

Share By Mail

2 Querys

Query 1 by kritikaBhatore on Nov. 24, 2020, 2:41 p.m.

@anika
Try py -m django-admin startproject projectName

Query 2 by anika on Nov. 24, 2020, 2:28 p.m.

It is not working on my system mam.What shall i do?
